Redding Reloading Imperial Bio Green Case Lube Now Added to Pro Pak and Versa Pak Offerings for 2015

Cortland, NY..... Redding Reloading Equipment has expanded the use of its unique Bio Green Case Lube in their 2015 product offering. Highly positive customer reports and heavy reorder demand has shown the market's interest in a non petroleum based and highly effective, case lube. With the continued popularity of ultrasonic cleaners Imperial Bio Green offers even more advantages over traditional petroleum based lubes.

Oil floats on water and hence a petroleum based case lube will sit atop the cleaning solution of an ultrasonic case cleaner. Your cleaned cases are contaminated with this oil as you remove them from the cleaning solution. Bio green is oil free and breaks down in common cleaning solutions by being nature based rather than PetroChemical based. No oil left on the surface of the solution means no film on your clean cases.

Beginning in 2015 all Redding ProPak and VersaPak reloading kits will include Imperial Bio Green as the case lube choice. Redding's research and engineering team developed Imperial Bio Green Case Lube to be both highly effective in its primary role as a high pressure lubricant suitable for all reloading applications including case forming and to be not only environmentally friendly but clean bench friendly as well.

Redding Reloading Equipment has focused on building the finest quality, American Made products for the precision handloading market since 1946. To learn more about our ongoing commitment to the precision handloader and to request a copy of the new 2015 Redding catalog visit:
