Redding Reloading Equipment New Number 18 Bullet Seating Micrometer

Cortland, NY.....Redding Reloading Equipment for 2019 has added a new Bullet Seating Micrometer to their product line to replace the #18 seat plug. This Bullet seating micrometer (P/N 09078) is specifically for the 380 Auto/ 380 ACP and can be added as an upgrade to current standard Redding seating dies for this cartridge.

The bullet seating micrometer produces precise and repeatable adjustment with a reference calibration of 0.001". This allows you to accurately duplicate previous loads and have minimal set up when changing bullets. Bullet seating micrometers also allow you to fine tune loads for the best accuracy from your individual firearm.

This bullet seating micrometer also comes standard on the new for 2019 Redding Premium Dies set in 380 Auto. This set features a carbide sizing die, the unique Redding Expander Die with the expander itself coated in TiN for an incredible hard and smooth finish that resists brass build up, and The Redding Seating Die complete with factory-installed Bullet Seating Micrometer. Making it a great set for both single stage and progressive presses.

Redding Reloading Equipment has focused on building the finest quality, American Made products for the precision handloading market since 1946.
