Redding Reloading Equipment Adds 6.5 Weatherby RPM for 2020 Die Selections

Cortland, NY..... Weatherby's introduction of their new 6.5mm RPM or Rebated Precision Magnum is a significant departure from their previous designs in cartridge cases but presents interesting velocity and long-range capabilities in a rifle package that is light and adaptable. It is essentially a lengthened 6.5-.284 Norma. It has little body taper and a 35-degree shoulder, and with its rebated rim it is compatible with standard .30-06 bolt faces. Factory loadings are capable of pushing a 140 grain bullet to over 3000 FPS. Redding has always supported innovative new cartridges and in this case the opportunities are amazing. With the large number of excellent 6.5mm bullets this a perfect candidate for improvement and experimentation through handloading.

For 2020 Redding will be offering a full selection of standard die sets for the cartridge. With Full Length, Neck sizing and Seating Dies offered, they will be available in a standard Two Die Set and a Three Die Deluxe Set. Individual dies will also be offered as will accessory Carbide size button kits and an accessory bullet seating micrometer for precise and repeatable seating depth.

The beauty of this cartridge is that it fits a standard 30-06 bolt face and in a standard long action allowing for easy re-barreling to create a very accurate and long-range hunting rifle from a wide range of existing actions.

Redding Reloading Equipment has focused on building the finest quality, American Made products for the precision handloading market since 1946.
